

Digitalization - Gentle remainder for all of us

“ Every industry and every organization will have to transform itself in the next few years. What is coming at us is bigger than the original internet and you need to understand it, get on board with it and figure out how to transform your business.

Tim O'Reilly

A role of digital [transformation] strategy for a modern SAI

Miikka Saarteinen 12.11.2020
National Audit Office of Finland

Why digital is a must for SAIs to stay relevant now and the future?

We live in a VUCA world with new kind of demand for SAI's work:

- We need to make **clarity complex issues**
- We need to be **timelier** and meet the **demand for speed**
- We need to **ensure the quality** of our work **and sustain and build trust** in society
- We need to **deliver the results** to the **right forums** to develop the government and society in order to **make impacts**

With the strategic use of digital technologies and data analytics – integrated into our day-to-day auditing work, we will keep abreast of the ongoing change and stay relevant.

Digital Transformation Strategy is a catalyst to implement the (business) strategic goals in the action

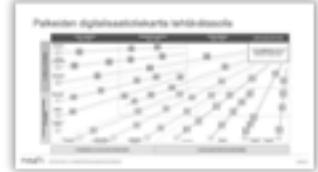

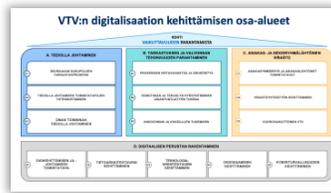

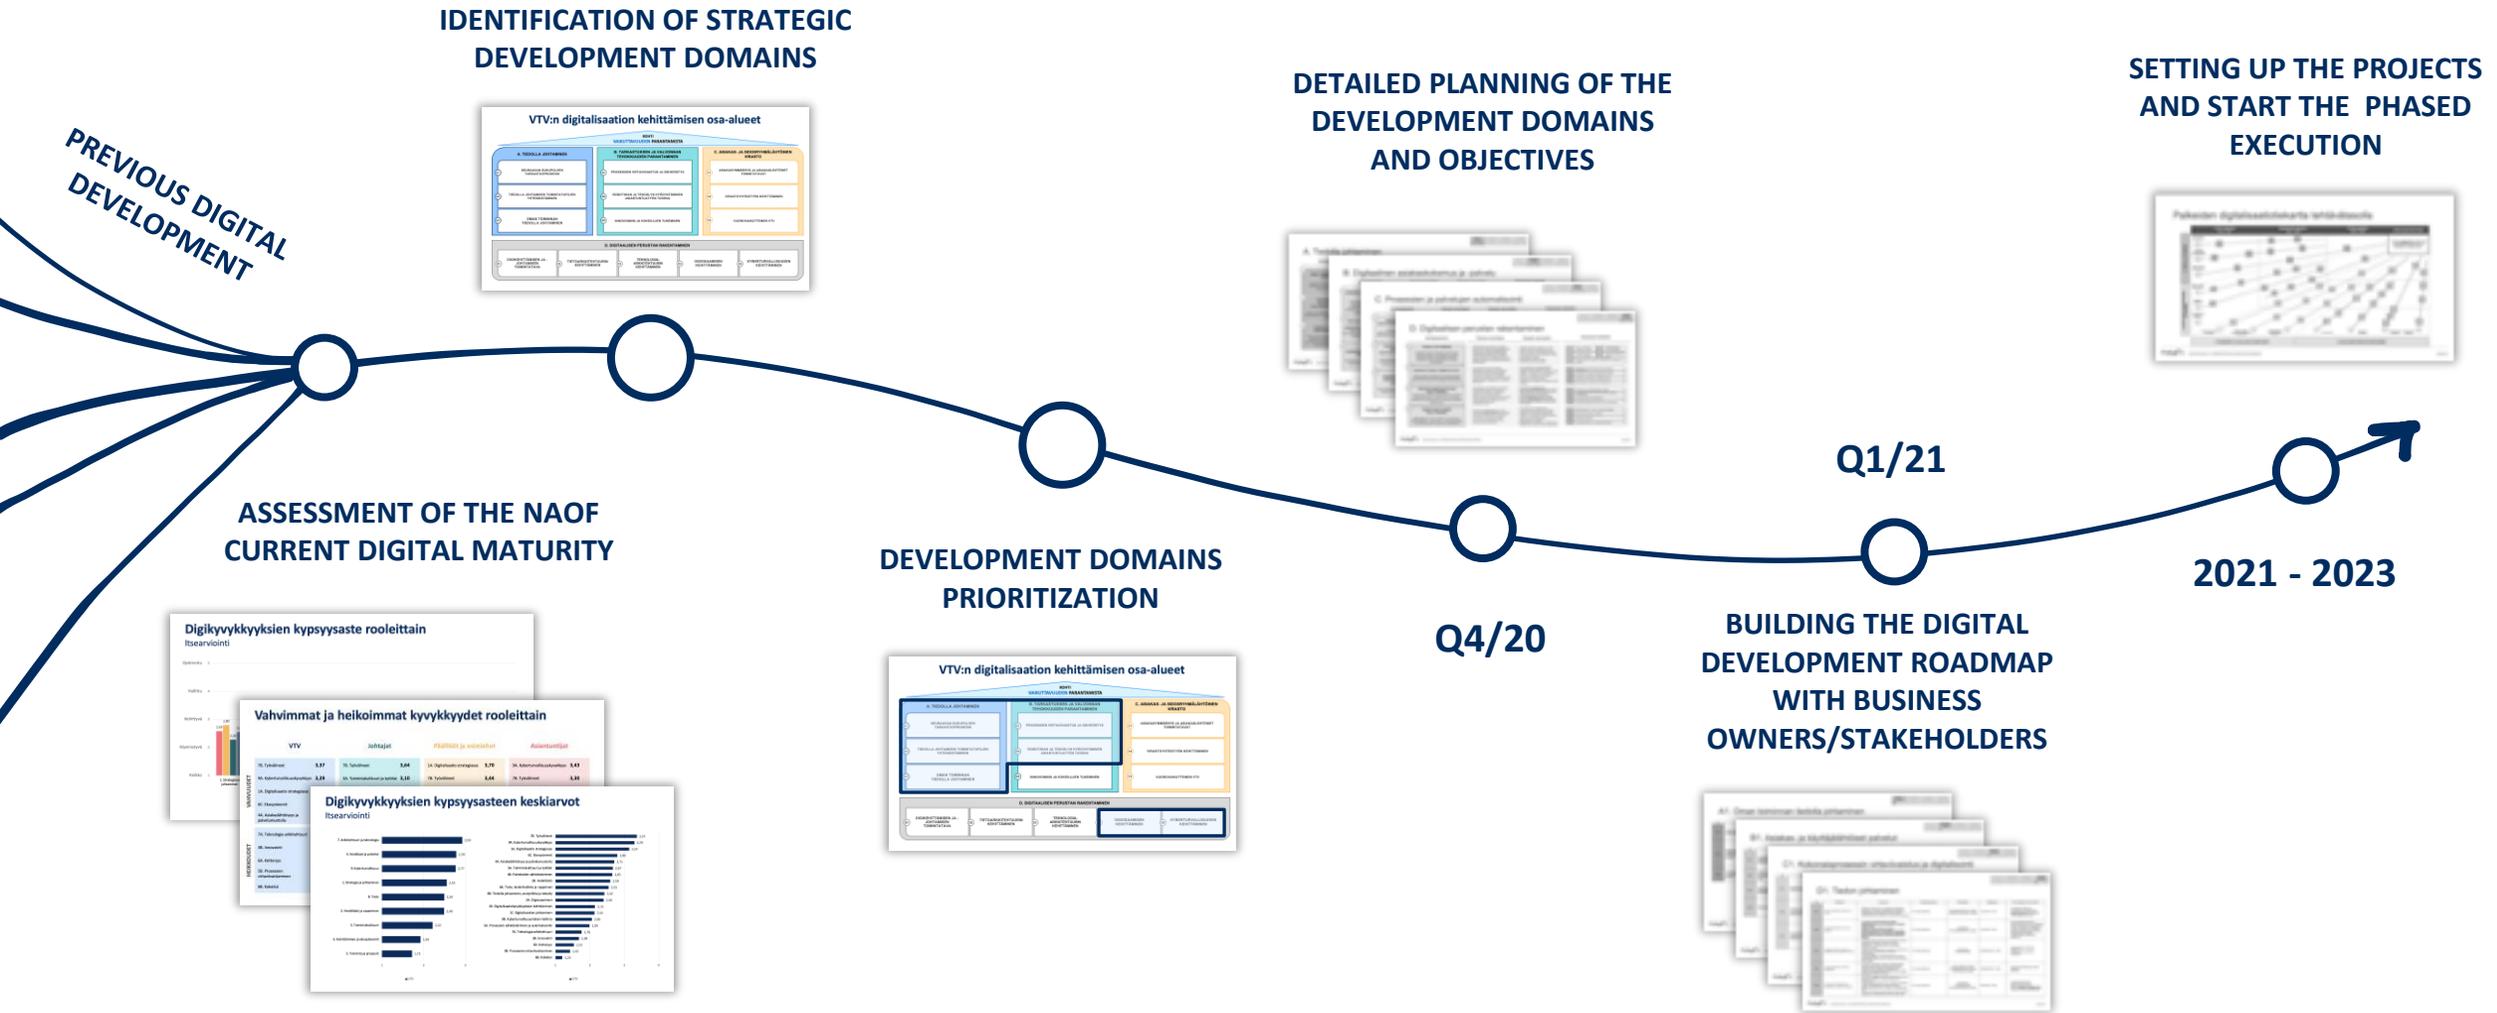

- Developing an effective digital transformation strategy (DTS) is something that must be tailored to each organization individually – there is not a one size fits for all plan
- DTS involves a careful assessment of the operational environment, your organization's capabilities and resources, the state of relevant technology, and a host of other possible variables.'
- However, even the content is unique for each organization or SAI, the key domains should be addressed at the strategy to ensure its success.

Digital Transformation Strategy

– key areas to focus in planning and execution

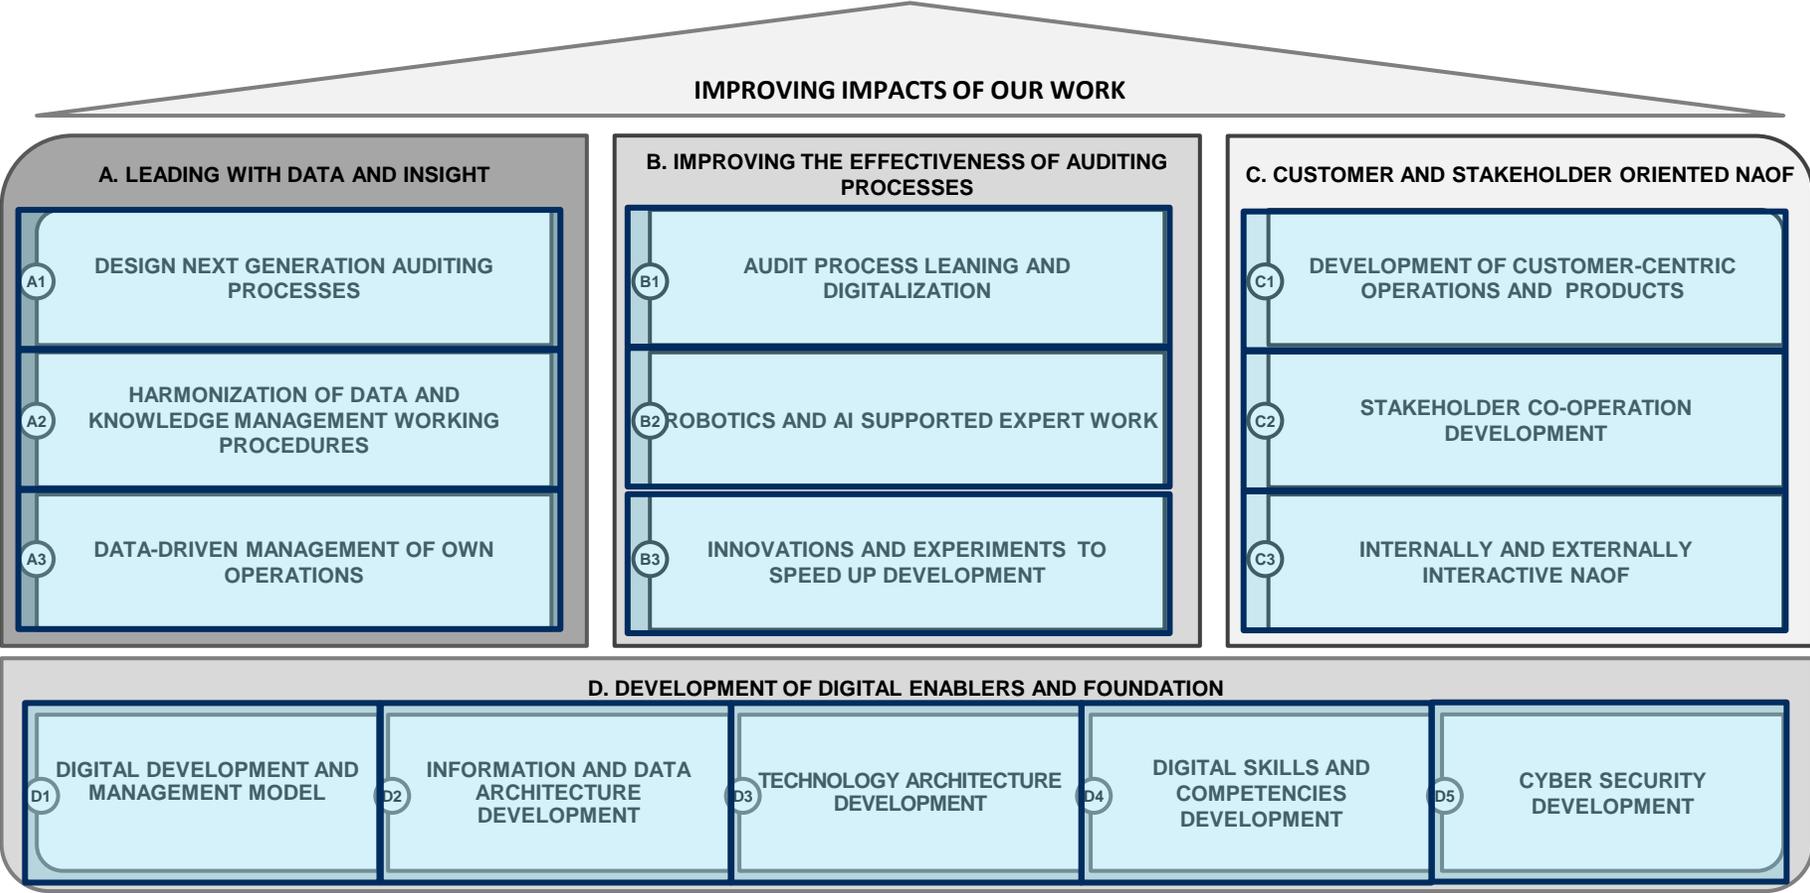

1. Ensure the **digital is integrated with the strategy.**
2. **Focus on core auditing/monitoring processes** and drive to change the whole operational model to take advantage from digital and data-analytics
3. **Build a culture and models for continuous process development**, fueled by the own audit expertise, data available and possibilities that digital technologies offers
4. Ensure, align and sustain organisational **enablers for digital transformation:**
 - People, skills and organisation culture
 - Data and information management
 - Technology and architecture
 - Right partners and ecosystems

CASE NAOF: A way forward with our Digital Transformation strategy

The domains of development in NAOF Digital Transformation Strategy 2020 - 2023

- Impact on society
- Materiality and timeliness
- Customer-oriented products and services
- Competent personnel and high well-being at work
- Efficient shared processes and practices
- Active builder of the future

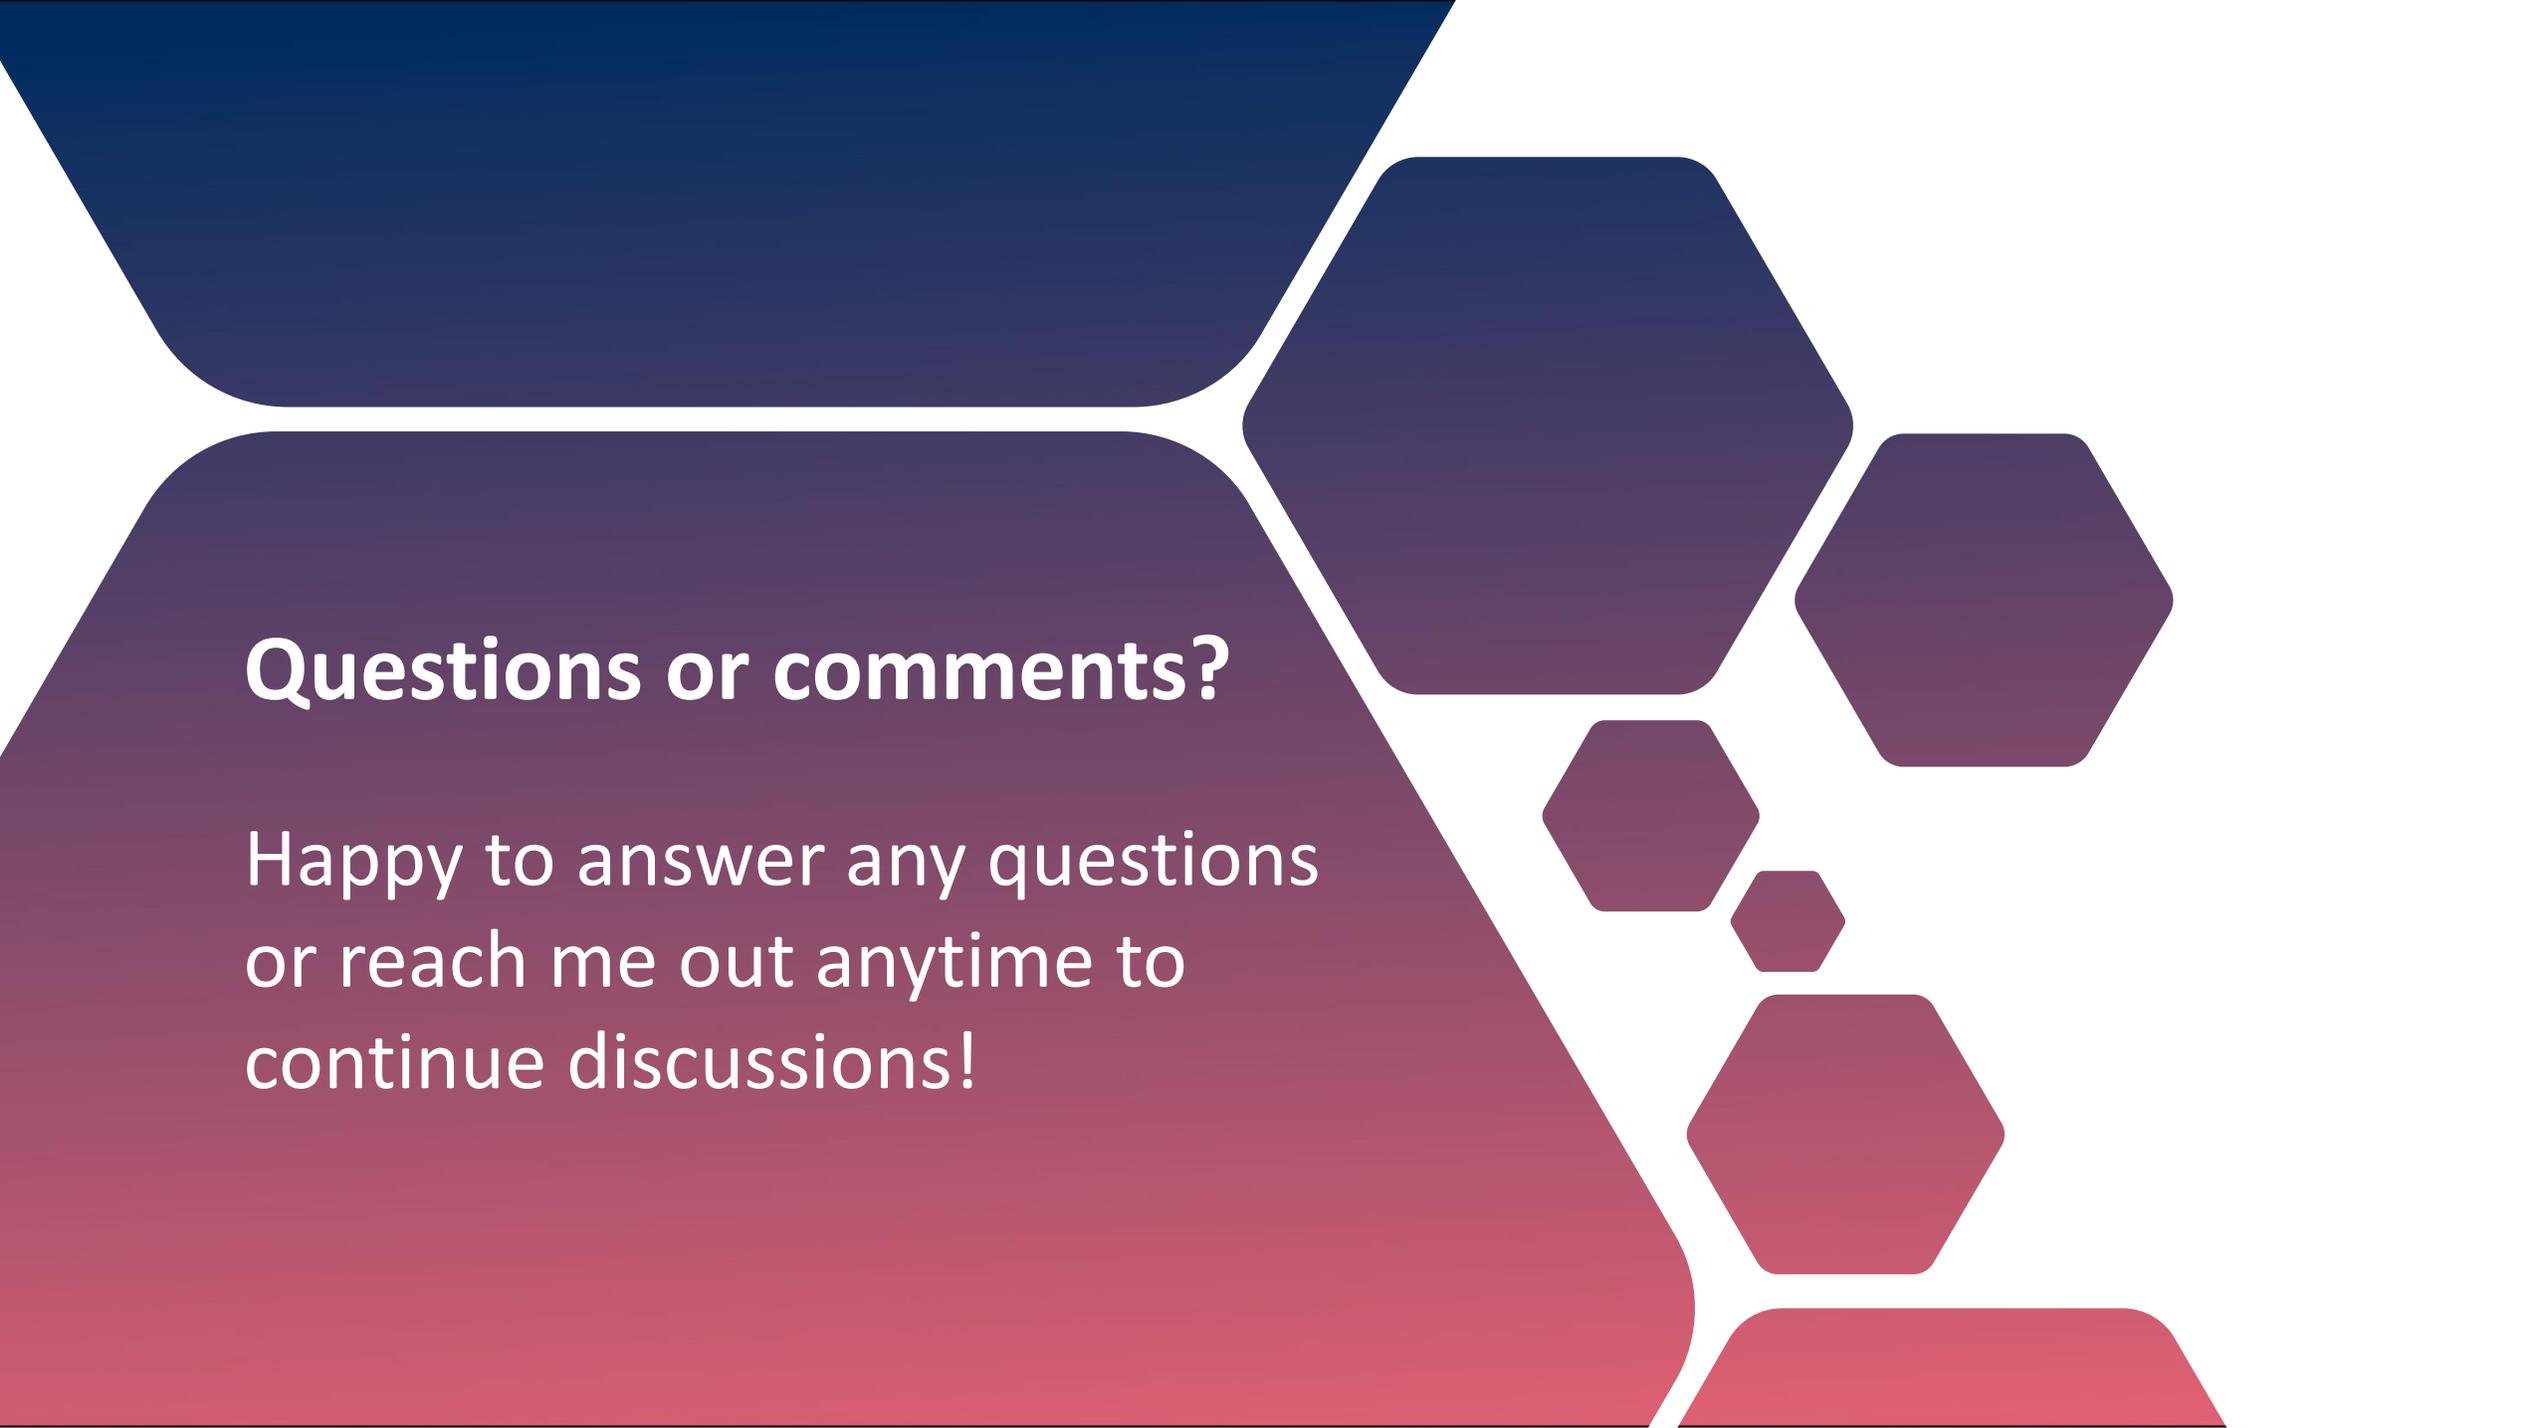

NAOF strategic priorities and goals

Final Thoughts

The ultimate goal for a digital strategy development should be making digital strategy redundant - by integrating the use of digital and data in the heart of our day-to-day work and operational model.

To reach the goal, guide and keep us focused during the journey we need a digital transformation strategy and systematic execution in many areas of the business.

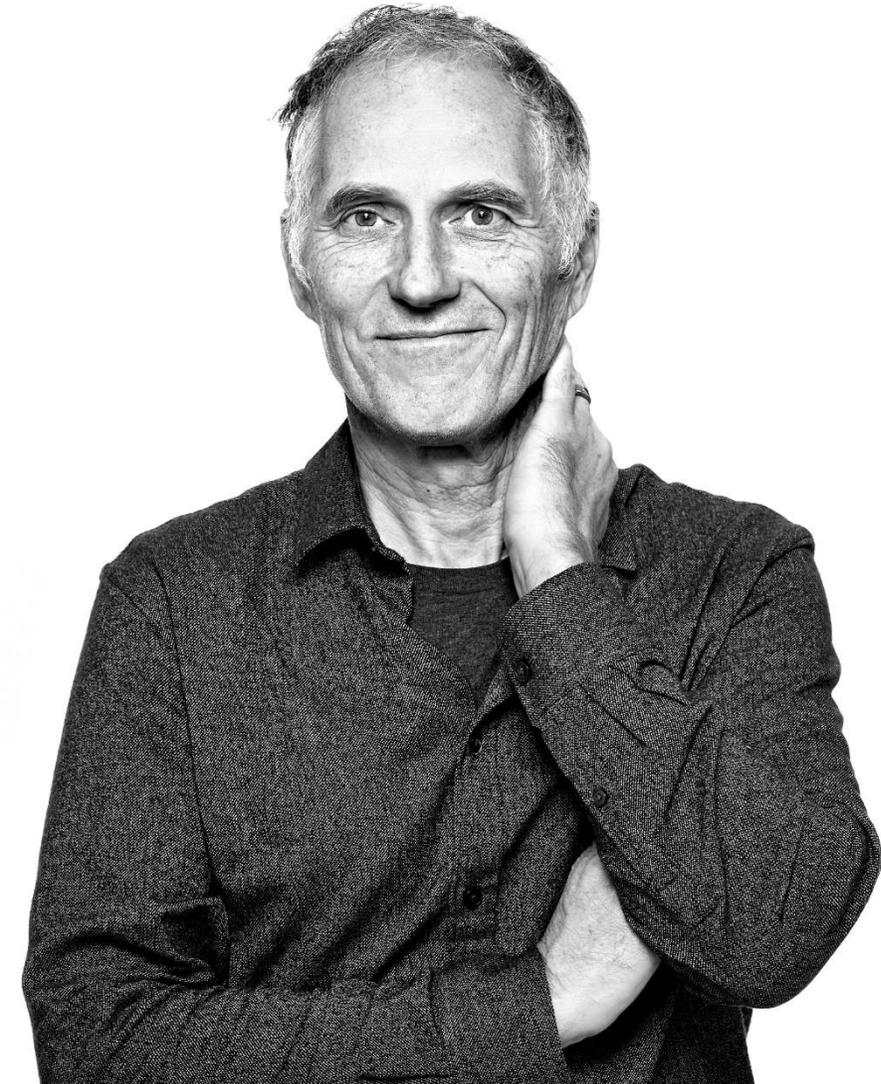

That is what we are doing in the NAOF!
